

Native Bovine α -L-Fucosidase

Cat. No. NATE-0266

Lot. No. (See product label)

Introduction

Description In enzymology, an alpha-L-fucosidase (EC 3.2.1.51) is an enzyme that catalyzes the chemical reaction: an alpha-L-fucoside + H₂O \leftrightarrow L-fucose + an alcohol. Thus, the two substrates of this enzyme are alpha-L-fucoside and H₂O, whereas its two products are L-fucose and alcohol. This enzyme belongs to the family of hydrolases, specifically those glycosidases that hydrolyse O- and S-glycosyl compounds. This enzyme participates in n-glycan degradation and glycan structures-degradation.
