

cholesterol 25-hydroxylase

Cat. No. EXWM-1049

Lot. No. (See product label)

Introduction

Description Unlike most other sterol hydroxylases, this enzyme is not a cytochrome P-450. Instead, it uses diiron cofactors to catalyse the hydroxylation of hydrophobic substrates. The diiron cofactor can be either Fe-O-Fe or Fe-OH-Fe and is bound to the enzyme through interactions with clustered histidine or glutamate residues. In cell cultures, this enzyme down-regulates cholesterol synthesis and the processing of sterol regulatory element binding proteins (SREBPs).

Synonyms cholesterol 25-monooxygenase

Product Information

Form Liquid or lyophilized powder

EC Number EC 1.14.99.38

CAS No. 60202-07-5

Reaction cholesterol + AH₂ + O₂ = 25-hydroxycholesterol + A + H₂O

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
