

Native Russell's viper venom Factor V Activating Enzyme

Cat. No. NATE-0249

Lot. No. (See product label)

Introduction

Description Factor V activator for RVV contains fucose, mannose, galactose, glucosamine, and neuraminic acid. Factor V activating enzyme from RVV is an arginine esterase that is sensitive to diisopropyl fluorophosphate (DFP).

Applications Factor V activating enzyme from Russell's viper venom (RVV) is a single-chain glycoprotein that is involved in the rapid clotting of blood. Factor V circulates in the blood as an inactive cofactor and must be activated by proteases such as Factor V activating enzyme from RVV 1. This product may be useful in studying the blood coagulation cascade as well as the inherited deficiency called parahemophilia

Synonyms EC 3.4.21.95; Factor V Activating Enzyme; Snake venom factor V activator; 65522-14-7; Factor V activator

Product Information

Source Russell's viper venom

Form lyophilized powder; Stabilized in albumin and sodium chloride.

EC Number EC 3.4.21.95

CAS No. 65522-14-7

Activity 20 units/mg protein

Unit Definition One unit will increase the Factor V activity in 0.1 mL of fresh normal human plasma by at least 2× after incubation for 3 min at 37°C.

Storage and Shipping Information

Storage -20°C
