

dimethylglycine N-methyltransferase

Cat. No. EXWM-1758

Lot. No. (See product label)

Introduction

Description This enzyme, from the marine cyanobacterium *Synechococcus* sp. WH8102, differs from EC 2.1.1.157, sarcosine/dimethylglycine N-methyltransferase in that it cannot use sarcosine as an alternative substrate. Betaine is a 'compatible solute' that enables cyanobacteria to cope with osmotic stress by maintaining a positive cellular turgor.

Synonyms BsmB; DMT

Product Information

Form Liquid or lyophilized powder

EC Number EC 2.1.1.161

Reaction S-adenosyl-L-methionine + N,N-dimethylglycine = S-adenosyl-L-homocysteine + betaine

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
