

Native *Agaricus bisporus* Laccase

Cat. No. NATE-0370

Lot. No. (See product label)

Introduction

Description Laccase is a blue copper oxidase that reduces molecular oxygen to water. Laccase oxidizes polyphenols, methoxy-substituted phenols and diamines, but not tyrosine. Oxidation by laccase is an one-electron reaction that generates a free radical.

Applications Laccase is polyphenol oxidase found in many plants, fungi and microorganisms. Laccases may be useful in enzymatic biofuel systems, teeth whitening, textile dyeing, and in other applications that require the removal of oxygen

Synonyms Laccases; EC 1.10.3.2; 80498-15-3; urishiol oxidase; urushiol oxidase; p-diphenol oxidase; benzenediol:oxygen oxidoreductase

Product Information

Source Agaricus bisporus

Form powder; deep brown

EC Number EC 1.10.3.2

CAS No. 80498-15-3

Activity > 4 units/mg

Unit Definition 1 U corresponds to the amount of enzyme which converts 1 μmol catechol per minute at pH 6.0 and 25°C

Storage and Shipping Information

Storage -20°C
