

oxepin-CoA hydrolase

Cat. No. EXWM-3997

Lot. No. (See product label)

Introduction

Description The enzyme from *Escherichia coli* is a bifunctional fusion protein that also catalyses EC 1.17.1.7, 3-oxo-5,6-dehydrosuberyl-CoA semialdehyde dehydrogenase. Combined the two activities result in a two-step conversion of oxepin-CoA to 3-oxo-5,6-dehydrosuberyl-CoA, part of an aerobic phenylacetate degradation pathway. The enzyme from *Escherichia coli* also exhibits enoyl-CoA hydratase activity utilizing crotonyl-CoA as a substrate.

Synonyms paaZ (gene name)

Product Information

Form Liquid or lyophilized powder

EC Number EC 3.3.2.12

Reaction 2-oxepin-2(3H)-ylideneacetyl-CoA + H₂O = 3-oxo-5,6-dehydrosuberyl-CoA semialdehyde

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
