

γ -glutamyl- γ -aminobutyrate hydrolase

Cat. No. EXWM-4486

Lot. No. (See product label)

Introduction

Description Forms part of a putrescine-utilizing pathway in Escherichia coli, in which it has been hypothesized that putrescine is first glutamylated to form γ -glutamylputrescine, which is oxidized to 4-(γ -glutamylamino)butanal and then to 4-(γ -glutamylamino)butanoate. The enzyme can also catalyse the reactions of EC 3.5.1.35 (D-glutaminase) and EC 3.5.1.65 (theanine hydrolase).

Synonyms γ -glutamyl-GABA hydrolase; PuuD; YcjL; 4-(γ -glutamylamino)butanoate amidohydrolase; 4-(L- γ -glutamylamino)butanoate amidohydrolase

Product Information

Form Liquid or lyophilized powder

EC Number EC 3.5.1.94

Reaction 4-(γ -L-glutamylamino)butanoate + H₂O = 4-aminobutanoate + L-glutamate

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
