

chlorophyllide a 31-hydratase

Cat. No. EXWM-5006

Lot. No. (See product label)

Introduction

Description The enzyme, together with EC 1.3.7.15, chlorophyllide-a reductase, and EC 1.1.1.396, bacteriochlorophyllide-a dehydrogenase, is involved in the conversion of chlorophyllide a to bacteriochlorophyllide a. The enzymes can act in multiple orders, resulting in the formation of different intermediates, but the final product of the cumulative action of the three enzymes is always bacteriochlorophyllide a. The enzyme catalyses the hydration of a vinyl group on ring A, converting it to a hydroxyethyl group.

Synonyms bchF (gene name)

Product Information

Form Liquid or lyophilized powder

EC Number EC 4.2.1.165

Reaction (1) 3-devinyl-3-(1-hydroxyethyl)chlorophyllide a = chlorophyllide a + H₂O; (2) 3-deacetyl-3-(1-hydroxyethyl)bacteriochlorophyllide a = 3-deacetyl-3-vinylbacteriochlorophyllide a + H₂O

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
