

CMP-Sialic Acid Synthetase from *Neisseria meningitidis* group B, Recombinant

Cat. No. NATE-0023

Lot. No. (See product label)

Introduction

Description In enzymology, a N-acylneuraminate cytidyltransferase (EC 2.7.7.43) is an enzyme that catalyzes the chemical reaction: CTP + N-acylneuraminate \rightleftharpoons diphosphate + CMP-N-acylneuraminate. Thus, the two substrates of this enzyme are CTP and N-acylneuraminate, whereas its two products are diphosphate and CMP-N-acylneuraminate. This enzyme belongs to the family of transferases, specifically those transferring phosphorus-containing nucleotide groups (nucleotidyltransferases). This enzyme participates in aminosugars metabolism.

Applications The enzyme has been utilized to synthesize CMP-sialic acid and its derivatives.
