

Native Bovine Protein Phosphatase 2A1

Cat. No. NATE-0616

Lot. No. (See product label)

Introduction

Description Protein Phosphatase 2A1 is a trimer consisting of the A, B, and C subunits of the PP2A family. It has a total molecular weight of 192 kDa. Protein Phosphatase 2A is a cytoplasmic protein, which colocalizes with microtubule proteins and is involved in the dephosphorylation of the tau protein and oncoprotein 18. Protein Phosphatase 2A1 binds to polymerized microtubule proteins and may be targeted by tubulin in modulating phosphatase activity.

Applications Protein Phosphatase 2A1 is a divalent cation-dependent protein serine/threonine phosphatase implicated as a growth suppressor and is associated with dis-regulation in cancer. The enzyme is involved in regulating numerous cellular processes and is used to study cell cycle, growth, and differentiation. The protein phosphatase 2A1 has been used to treat human fibroblast cells prior to Western Blot analysis.

Synonyms Protein Phosphatase 2A1; PP2A1; PPA2A1

Product Information

Source Bovine

Form Solution in 50 mM Tris-HCl, pH 7.0, containing 14 mM 2-mercaptoethanol, 1 mM benzamidine, 0.1 mM PMSF, 1 mM EDTA, and 50% glycerol

Purity >90% (SDS-PAGE)

Activity > 1500 units/mg protein

Unit Definition One unit will release 1.0 nanomole of phosphate from ³²P-labeled phosphorylase A per minute at pH 7.0 at 30°C.

Usage and Packaging

Package vial of 1 µg

Storage and Shipping Information

Stability -70°C
