

Mung Bean Protein Hydrolyzed

Cat. No. CEFX-134

Lot. No. (See product label)

Introduction

Description Mung Bean Protein Hydrolyzed refers to the hydrolysis of mung bean protein by enzymes, which breaks

down the large protein molecules into small amino acid residues (molecular weight of 500-3000 Dalton).

This makes mung bean protein easier to digest and absorb.

Applications Mung Bean Protein Hydrolyzed is a common food additive used in the production of food products,

medicines and health products etc. Mung Bean Protein Hydrolyzed has certain nutritional value and can improve the taste of food products and the moisturising properties of food products, as well as increase

the stability of the products.

Product Information

Form Powder

Purity 90%

Solubility Water soluble

Storage and Shipping Information

Storage Keep sealed, away from light and in a dry place (recommended storage temperature below 25°C).
