

Recombinant Poly(A) Polymerase

Cat. No. COV-014

Lot. No. (See product label)

Introduction

Description This product is a polymerase expressed by recombinant E.coli. The enzyme does not depend on the

template and can catalyze the sequential incorporation of ATP into the 3′ end of RNA in the form of AMP, that is, adding a polyadenosine tail to the 3′ end of RNA. Poly(A) structure can improve the stability of RNA and improve the translation efficiency of mRNA in eukaryotic cells. Poly(A) polymerase has high

tailing efficiency and can add 20-200 A bases to the 3' end of RNA.

Applications Improve the translation efficiency of mRNA in eukaryotic cells. For RNA 3' end labeling. Poly(A) tailing of

RNA for cloning or purification.

Product Information

Source E. coli

Form Clear liquid

Purity ≥95%, no DNase, RNase activity, host DNA residue≤100pg/mg, host protein residue≤50ppm, endotoxin

residue≤10EU/mg, no protease activity, sterile, no mycoplasma.

Activity 5 U/μL

Unit One unit is defined as the amount of enzyme that will incorporate 1 nmol of AMP into RNA in a 20 μ l

Definition volume in 10 minutes at 37°C.

Storage and Shipping Information

Storage at -20 °C (Avoid repeated freeze-thaw cycles)
