

## Pyruvate Kinase M2 from Human, Recombinant

Cat. No. NATE-0938

Lot. No. (See product label)

### Introduction

**Description** Pyruvate kinase (PK) is an important glycolytic enzyme catalyzing the last step of glycolysis, transferring a phosphate group from phosphoenolpyruvate to ADP to yield one molecule of ATP and one molecule of pyruvate.

**Synonyms** Cytosolic Thyroid hormone-binding protein (CTHBP); M2-PK; OPA-interacting protein 3 (OIP-3); PKM2; Pyruvate kinase 3 (PK3); Pyruvate kinase muscle isozyme; p58; Pyruvate kinase; phosphoenolpyruvate kinase; phosphoenol transphosphorylase; pyruvate kinase (phosphorylating); fluorokinase; fluorokinase (phosphorylating); pyruvic kinase; pyruvate phosphotransferase; ATP:pyruvate 2-O-phosphotransferase

### Product Information

**Species** Human

**Source** E. coli

**Form** Lyophilized powder containing phosphate buffer at pH7.5, NaCl, DTT and a carbohydrate stabilizer.

**CAS No.** 9001-59-6

**Molecular Weight** 58 kDa

**Activity** > 100 unit/mg protein

**Unit Definition** One unit will convert 1.0  $\mu$ mole of phosphoenol-pyruvate to pyruvate per minute at pH 7.6 at 37 °C, in the presence of 1 mM fructose-1,6-bisphosphate.

### Storage and Shipping Information

**Storage** Store at -20°C
