

Native Human Creatine Kinase MB/MM Mix

Cat. No. NATE-0957

Lot. No. (See product label)

Introduction

Description Creatine kinase plays a key role in the energy metabolism of cells with intermittently high and fluctuating energy requirements. Examples of such cells include cardiac or skeletal muscle cells and neural tissues of brain and retina. The enzyme catalyzes the reversible transfer of the phosphoryl group from phosphorylcreatine to ADP, in order to generate ATP. The molecular mass of the protein is found to be approximately 80 kDa. It is made up of 2 subunits, each having a molecular weight of 40 kDa \pm 2000. The lighter subunit is present in larger amounts.

Applications Diagnostic Controls, Calibrators & Standards; Immunoassays; Clinical Chemistry; Testing/Assay Validation; Life Science; Cardiac Markers; Manufacturing

Synonyms Creatine Kinase MB/MM Mix; CK-MB/MM; ATP:creatine phosphotransferase; Creatine Kinase; CK; CPK; MM-CK; MB-CK; creatine phosphokinase; creatine phosphotransferase; phosphocreatine kinase; adenosine triphosphate-creatine transphosphorylase; Mi-CK; CK-MM; CK-MB; CKMiMi; MiMi-CK; 9001-15-4

Product Information

Species Human

Source Human Heart

Form Glycerol solution

CAS No. 9001-15-4

Activity > 500 U/mL

Concentration > 1.0 mg/mL

Contaminants LDH: < 1.0% GOT/AST: < 1.0%

Unit Definition One unit will catalyze the transphosphorylation of one micromole of phosphate from creatine phosphate to ADP per minute at 37°C.

Storage and Shipping Information

Storage Store at -20°C

Stability 2 years
