

DPP IV Inhibitor, NVP DPP 728

Cat. No. CEI-0463

Lot. No. (See product label)

Introduction

Description A potent, selective, reversible, and slow binding dipeptidyl peptidase IV inhibitor (IC₅₀ = 14 nM). Displays >15,000 fold selectivity over DPP-II and a range of Proline-cleaving proteases. Displays anti-diabetic activity in vivo, improves glucose tolerance, increases glucagon-like peptide 1 (GLP-1) and insulin levels, and augments insulin secretion and GLUT-2 levels.

Synonyms 6-[[2-[[2-(2S)-2-Cyano-1-pyrrolidinyl]-2-oxoethyl]amino]ethyl]amino-3-pyridinecarbonitrile Dihydrochloride

Product Information

Appearance White to off-white solid

CAS No. 247016-69-9

Molecular Formula C₁₅H₁₈N₆O₂HCl

Chemical Name 6-[[2-[[2-(2S)-2-Cyano-1-pyrrolidinyl]-2-oxoethyl]amino]ethyl]amino-3-pyridinecarbonitrile Dihydrochloride

Molecular Weight 544.43

Purity >98% by HPLC

Targets DPP4

Solubility H₂O (~50 mg/ml)

Storage and Shipping Information

Storage -20 centigrade

Shipping Conditions Gel pack
