

## β-Mannosidase from *Streptomyces coelicolor*, Recombinant

Cat. No. NATE-1189

Lot. No. (See product label)

### Introduction

**Description** Beta-mannosidase is an enzyme with system name beta-D-mannoside mannohydrolase. This enzyme catalyses the following chemical reaction:Hydrolysis of terminal, non-reducing beta-D-mannose residues in beta-D-mannosides. This gene encodes a member of the glycosyl hydrolase 2 family. The encoded protein localizes to the lysosome where it is the final exoglycosidase in the pathway for N-linked glycoprotein oligosaccharide catabolism. Mutations in this gene are associated with beta-mannosidosis, a lysosomal storage disease that has a wide spectrum of neurological involvement.

**Synonyms** β-mannosidase; mannanase; mannase; β-D-mannosidase; β-mannoside mannohydrolase; exo-β-D-mannanase; EC 3.2.1.25; 9025-43-8

### Product Information

**Source** Streptomyces coelicolor A3(2)

**EC Number** EC 3.2.1.25

**CAS No.** 9025-43-8

**Molecular Weight** 56179.6 Da
