

GlcNAc-1-phosphate uridyltransferase from Human, Recombinant

Cat. No. NATE-1500

Lot. No. (See product label)

Introduction

Description N-Acetylglucosamine-1-phosphate uridyltransferase (GlmU), a bifunctional enzyme exclusive to prokaryotes, belongs to the family of sugar nucleotidyltransferases (SNTs). The enzyme binds GlcNAc-1-P and UTP, and catalyzes a uridyltransfer reaction to synthesize UDP-GlcNAc, an important precursor for cell-wall biosynthesis.

Synonyms N-Acetylglucosamine-1-phosphate uridyltransferase; GlmU; EC 2.3.1.157

Product Information

Species Human

Source E. coli

EC Number EC 2.3.1.157

CAS No. 9023-06-7;9031-91-8

Purity min 95% by SDS-PAGE

Unit Definition One unit is defined as the amount of enzyme that catalyzes the formation of 1 μ mol of UDP-GlcNAc from GlcNAc-1-P and UTP per minute at 37 °C.
