

Oligosaccharide reducing-end xylanase 8A from *Bacillus halodurans*, Recombinant

Cat. No. NATE-1515

Lot. No. (See product label)

Introduction

Description Oligosaccharide reducing-end xylanase (EC 3.2.1.156, Rex, reducing end xylose-releasing exo-oligoxylanase) is an enzyme with systematic name beta-D-xylopyranosyl-(1->4)-beta-D-xylopyranose reducing-end xylanase. This enzyme catalyses the following chemical reaction: Hydrolysis of (1->4)-beta-D-xylose residues from the reducing end of oligosaccharides. The enzyme acts rapidly on the beta-anomer of beta-D-xylopyranosyl-(1->4)-beta-D-xylopyranose.

Synonyms Oligosaccharide reducing-end xylanase; EC 3.2.1.156; Rex; reducing end xylose-releasing exo-oligoxylanase; beta-D-xylopyranosyl-(1->4)-beta-D-xylopyranose reducing-end xylanase

Product Information

Species	Bacillus halodurans
Source	E. coli
Form	35 mM NaHepes buffer, pH 7.5, 750 mM NaCl, 200 mM imidazol, 3.5 mM CaCl ₂ , 0.02% sodium azide and 25% (v/v) glycerol
EC Number	EC 3.2.1.156
CAS No.	879497-03-7
Molecular Weight	47.1 kDa
Purity	>90% as judged by SDS-PAGE
Concentration	1 mg/mL
Optimum pH	7.0-7.5
Optimum temperature	40 °C
Specificity	Xylooligosaccharides whose degree of polymerization is greater than or equal to 3

Storage and Shipping Information

Storage This enzyme is shipped at room temperature but should be stored at -20 °C.
