

## 5-Bromo-4-chloro-3-indolyl phosphate disodium salt

Cat. No. CSUB-0035

Lot. No. (See product label)

### Introduction

**Applications** For the colorimetric detection of alkaline phosphatase-labeled molecules, 5-Bromo-4-chloro-3-indolyl phosphate (BCIP) and Nitro Blue Tetrazolium (NBT) are available. The BCIP/NBT substrate system is versatile and functions in a variety of applications, including Northern Southern, and Western blotting, in situ hybridization, and immunohistochemistry. BCIP is provided in two salt forms: the disodium salt which is soluble in water and the p-toluidine form which is soluble in dimethylformamide. These salt forms may be used to prepare a stock solution that in combination with NBT and a reaction buffer, form a substrate solution for alkaline phosphatase. This substrate system, when incubated with alkaline phosphatase, produces an insoluble NBT diformazan product that is easily observable with its purple color. For added convenience, a mixture of BCIP and NBT is provided in an easily dissolvable tablet form or as a ready-to-use liquid.

**Synonyms** BCIP; X-phosphate disodium salt

### Product Information

**CAS No.** 102185-33-1

**Molecular Weight** 370.43

**Solubility** H<sub>2</sub>O: soluble 20 mg/mL

**Substrates** Alkaline Phosphatase

### Storage and Shipping Information

**Storage** -20°C
