

Native Microorganism N-Acetylneuraminic acid aldolase

Cat. No. DIA-182

Lot. No. (See product label)

Introduction

Description In enzymology, a N-acetylneuraminic acid aldolase (EC 4.1.3.3) is an enzyme that catalyzes the chemical reaction: N-acetylneuraminic acid \leftrightarrow N-acetyl-D-mannosamine + pyruvate. Hence, this enzyme has one substrate, N-acetylneuraminic acid, and two products, N-acetyl-D-mannosamine and pyruvate. This enzyme belongs to the family of lyases, specifically the oxo-acid-lyases, which cleave carbon-carbon bonds.

Applications This enzyme is useful for enzymatic determination of N-acetylneuraminic acid and sialic acid when coupled with the related enzymes in clinical analysis. For industrial use, this enzyme is useful for enzymatic synthesis of sialic acid.
